Week 2 Quiz Quiz, 10 questions

10/10 points (100.00%)

Congratulations! You passed!	Next Item
<ul> <li>1/1         point</li> <li>1.         Machine learning is an "iterative" process, meaning that an Al team often has to trup with something that's good enough, rather than have the first thing they try wo True</li> </ul>	
Correct	
False	
<ul> <li>1/1         point</li> <li>2.</li> <li>Say you want to use Machine Learning to help your sales team with automatic lea sales prospect) and output B (whether your sales team should prioritize them). The scrambled order, are:</li> </ul>	
(i) Deploy a trained model and get data back from users	
(ii) Collect data with both A and B	
(iii) Train a machine learning system to input A and output B	
What is the correct ordering of these steps?	
(ii) (iii) (i)	

Correct

## Correct

Correct

Customize product recommendations

10/10 points (100.00%)

<b>~</b>	1/1 point
	ou have a huge dataset ("Big Data"), it is generally not worth attempting machine learning or data projects on your problem.
	True
O F	False
Correc	t
<b>~</b>	1/1 point
	want to build an Al system to help recruiters with automated resume screening. Which of these steps involved in "technical diligence" for the? (Select all that apply.)
	Defining an engineering timeline
Correc	t
	Making sure that an Al system can meet the desired performance
Correc	t
	Making sure you can get enough data for this project
Correc	t
E	Ensuring that this is valuable for your business (e.g., estimating the project ROI)

## Week 2selected is correct

Quiz, 10 questions 10/10 points (100.00%)

<b>~</b>	1/1 point
7.	
Which o	of these statements about "business diligence" do you agree with?
	Business diligence can typically be completed in less than a day.
	Business diligence is the process of ensuring that the envisioned AI technology is feasible.
0	Business diligence is the process of ensuring that the AI technology, if it is built, is valuable for your business.
Corre	ct
	Business diligence applies only if you are launching new product lines or businesses.
<b>~</b>	1/1 point
	nt to use supervised learning for automated resume screening, as in the example above. Which of the ng statements about the Training Set are true? (Select all that apply.)
	It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate).
Corre	ct
	It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).
Un-se	elected is correct
Corre	It will be used by the AI team to train the supervised learning algorithm.

Week-2 Quiz Training set and Test set can be the same dataset. Quiz, 10 questions

10/10 points (100.00%)

## **Un-selected is correct**

1/1
point
9. For your automated resume screening application, you are now providing a Test Set to the AI team. Which of the following statements about the Test Set are true? (Select all that apply.)
The Test Set should ideally be identical to the Training Set.
Un-selected is correct
It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).
Un-selected is correct
It will be used by the AI team to evaluate the performance of the algorithm.
Correct
It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate)  Correct
1/1 point
10. Which of these are reasons that it's often unrealistic to expect an ML system to be 100% accurate?
You might not have enough data
Data can be mislabeled

Week 2 Quiz Can be ambiguous
Quiz, 10 questions All of the above.

10/10 points (100.00%)

Correct
